## Technické parametre

## Skríňa

Skrine ventilátorov TD-160 až TD-800 sú vyrobené z plastu, modely TD-1000 až TD-6000 sú vyrobené z ocelového galvanizovaného plechu opatreného epoxidovým lakom. Skríňa sa skladá z montážnej lišty s dvoma hrdlami a motora, ktorý je s hrdlami spojený rýchloupínacími sponami. Konštrukcia umožňuje demontáž motorovej časti bez nutnosti odpojiť potrubie.

## Obežné koleso

Obežné kolesá ventilátorov TD-160 až TD-800 sú vyrobené z plastu, obežné kolesá TD-1000 až TD-6000 sú vyrobené z hliníka.

## Motor

Striedavé motory vo ventilátoroch TD-160 až TD-350 majú dvojité vinutie, čo umožňuje prevádzku s dvojitými otáčkami. Ventilátory TD-500 až TD-2000 majú trojaké vinutie. TD-4000 a TD-6000 majú jedno vinutie, je možné ich regulovať zmenou napätia. Motory sú vybavené tepelnou poistkou (TD 160–TD 350) alebo tepelnou ochranou (TD 500–TD 6000). Ložiská sú guľčikové s tukovou náplňou na dobu životnosti. Trieda izolácie B, krytie IP44 (TD 160–2000), trieda izolácie F, krytie IP54 (TD 4000 a 6000). Motory ventilátorov TD a TD-T sú 1-fázové pre napätie 230 V, TD 4000 TRIF sú 3-fázové pre napätie 230/400 V, TD 6000 TRIF sú 3-fázové pre napätie 230/400 V.

## Svorkovnica

je umiestnená na skriní ventilátora, u niektorých typov obsahuje rozbehový kondenzátor.

## Regulácia otáčok

Pri striedavých motoroch s dvojitým vinutím (TD 160–350) sa otáčky prepínajú v dvoch stupňoch pomocou regulátorov REGUL 2 alebo COM 2 alebo zmenou napätia regulátormi REB (plynulá regulácia) alebo REV (pätstupňová regulácia). Pri motoroch s trojitým vinutím (TD 500 – TD 2000) sa otáčky prepínajú v troch stupňoch pomocou regulátorov COM 3 alebo INTER 4P alebo je možné použiť reguláciu zmenou napätia regulátormi REB (plynulá regulácia) alebo REV (pätstupňová regulácia). TD 4000 a 6000 sa dajú regulovať iba zmenou napätia. TD 4000 a 6000 TRIF sa dajú regulovať zmenou napätia alebo frekvenčnými meničmi. TD-T s jedným vinutím a vstavatým dobehom nie je možné regulovať.

## Montáž

ventilátorov je možná v každej polohe ventilátora. Skríňa nesmie prenášať mechanické namáhanie z potrubných rozvodov. Odporúča sa použiť pružné pripojenie k potrubiu.
